

Review Workshop

Meteo Complex Conference Room Port Vila, Tuesday 14 June 2016

Peter Johnston Dr Herbert Wade John Salong

Session 1: Island Visits: Mataso, Makira & Emae (11th-15th April & 20th -21st May) & Aneityum (19th-28th April & 24th-26th May)

Only four islands visited. Representative of remote Vanuatu?

Two visits

Mataso 12th April and 20th May

Makira 12th Appril and 20th May

Emae: 11th-15th April & 20th &

21st May

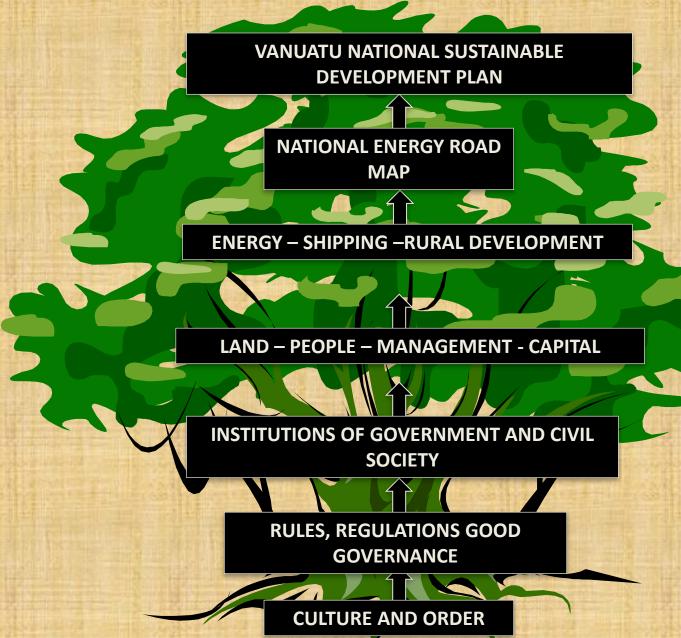

Aneityum 19th -29th April and

24th - 26th May

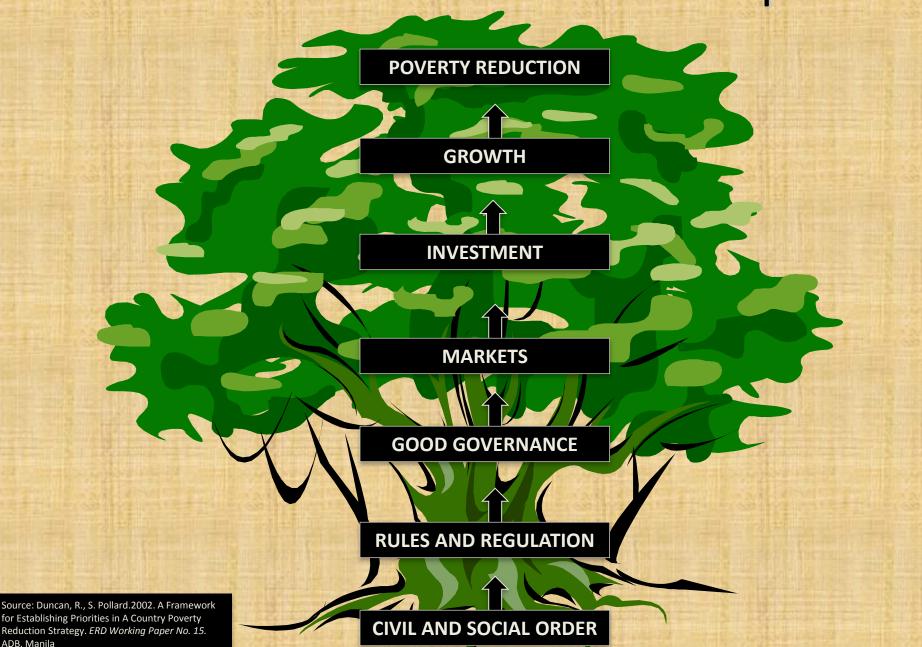

Visitors:

Mataso, Makira & Emae - April
Uwe Mades, Herb Wade & John
Salong. Aneityum – April:
Herb Wade and John Salong
May Visits: Peter Johnston & John
Salong

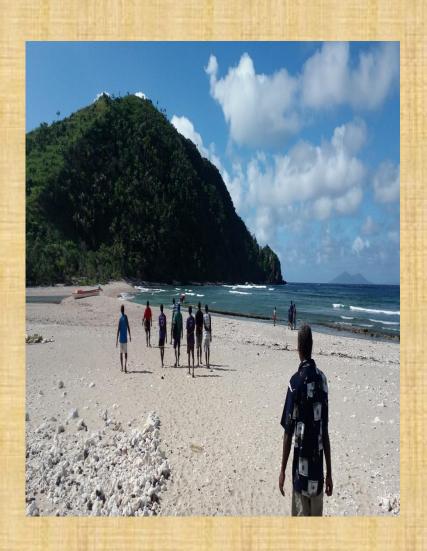

Vanuatu Political Economy Framework

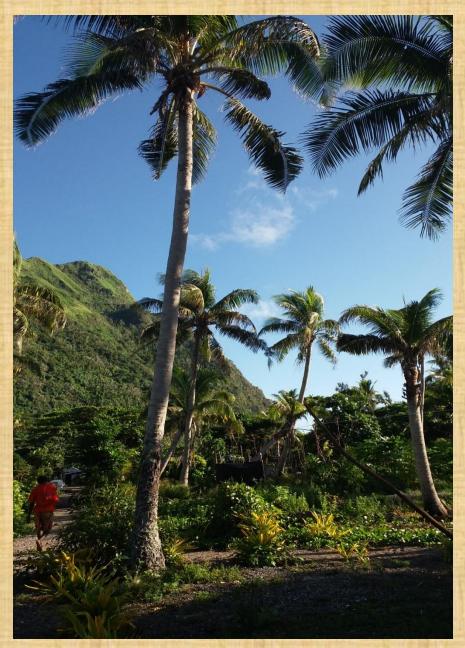

The Nature of Sustainable Development

Mataso Island 12th Apr & 20th May

- >Small Island
- ➤ Difficult to get to
- >Limited land or resources
- ➤ Visible effects of TC Pam
- >32 households
- >Limited phone reception
- ➤ Mataso Community on Efate
- **≻**Cohesive Social Capital
- Needing vision to overcome dependence

Mataso – coconuts 20th May

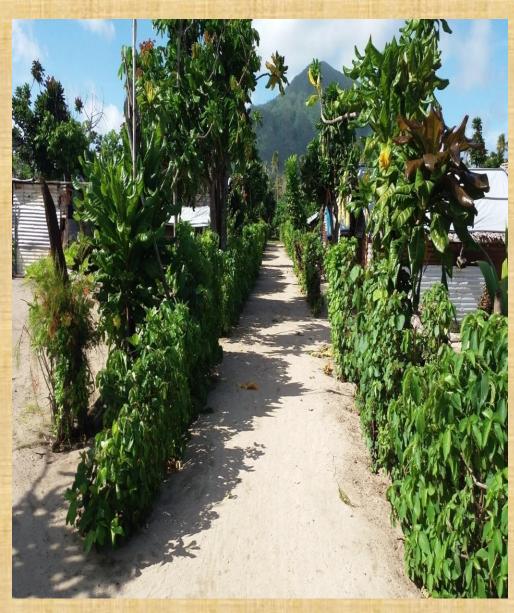

Makira Island 12th Apr & 20th May

- >Small Island
- ➤ Difficult to get to
- >Limited resources
- ➤ Visible effects of TC Pam
- >30 households
- >Limited phone reception
- ➤ Large Makira Diaspora on Efate
- ➤ Cohesive Social Capital
- Focus on health & Education
- Needing Vision to overcome dependence

Makira Island 12th Apr & 20th May

➤ Emae Island 11th-15th Apr & 20-21st May

10 Villages with unequal access to land & marine resources Visible effects of TC Pam 219 households Phone towers but poor reception in some villages Road link to every village **Human Resources** Weak Bridging Social Capital Visionary leadership is needed to realize the potential of the island of Emae

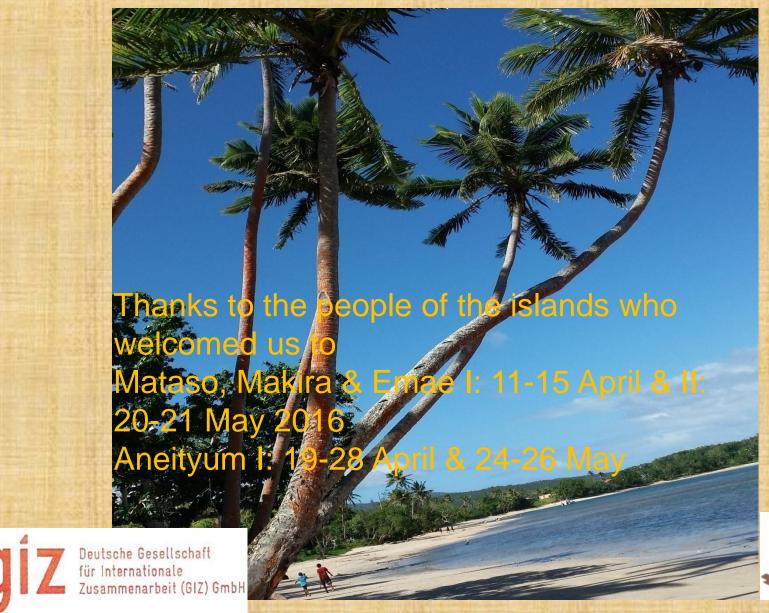

Chiefs of Emae – 20th May 2016

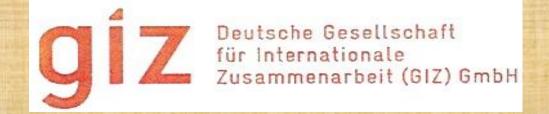

Aneityum island 19th -28th Apr & 24th -26th May

- ➤ 3 stations with access to land, forest, marine resources
- >Airstrip, & monthly shipping
- ➤ No visible effects of TC Pam
- >292 households
- Phone towers but unreliable reception in places
- >100 Cruise ships a year
- ➤ Healthy Cohesive and Bridging Social Capital
- > Focus on Education
- visionary leadership demonstrating sustainable development

Developing A Renewable Energy-based Off-Grid Electrification Master Plan for Remote Islands of Vanuatu along the Example of Four Islands

Conclusions

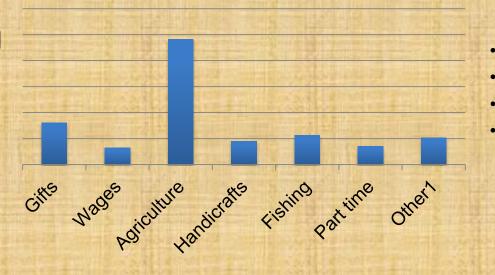

The selected islands provide a variety of village types that cover a range of cash access from under an average of USD 10 per month per household in Tebakoro to over USD 500 per month in Anelcauhat. Village geography ranges from compact and laid out in well-defined blocks and pathways to dispersed, random housing. Access to urban centers ranges from flights several times a week to hours of walking or boating between the area transport hub and the village. The desire of communities for electrical services ranges from very little to very strong. For all the villages, it will be costly to get the technicians and equipment to the electrification sites and carry out the electrification. Carrying out electrification of the four islands comprising this project will be a good test for both the various rural electrification technologies being used and the institutional structure that is developed for rural electrification.

Based solely on the site visits and survey, technologies for electrification are recommended for each village. All villages have a wide range of income levels and it is clear from the surveys that basic pico-solar kits will suffice for affordable basic electric services. In villages proposed for mini-grids, there are always outlier houses that may get better (and cheaper) service from a SHS as well as eliminating the substantial cost of a grid extension. Therefore all villages are expected to have households that are best served by SHS and pico-solar installations though the main form of electrification may be mini-grids or SHS. (for more detail on the village electrification design process please see Report 3 "Resources and Prioritized RE Options" and Report 4 "Preliminary Technical Design"
